		Session 1	**Introduction to sustainable and inclusive cities**	**Slides**	Sustainable and I		
10	8:30-8:40	10 min	Introduce instructor and course	1-5	slide on instructor, slide on agenda, slide on WSU for good		
15	8:40-8:45	5 min	Have students introduce themselves (in small groups or in large group, depending on number, with ice breaker question)	6	slide with instructions and ice breaker question		
25	8:45-8:55	10 min	What issues do cities currently have? (Word cloud, slides with news articles)	7-10	slide with question. slide with answer		
30	8:55-9:00	5 min	Why is this important? 5 quiz questions (including number of people who are expected to be living in slums by 2055: 2.1 billion)	11-15	slide with question QR code to join quiz. then quiz screen. slide with: important for people, economy, etc		
37	9:00-9:07	7 min	What is a sustainable city? (discussion, then 5 min video)	16-18	Creating Sustainapotential other intro video ~5 min		
44	9:07-9:14	7 min	An inclusive city...what could cause different experiences between different people? (what are "different" people? why are they different? different from who??) What might those different experiences look like?	19			
49	9:14-9:19	5 min	Two other terms: smart city, cognitive city (adaptive but predicting/changing preemptively). Biggest point: cities should be for people. cognitive cities serve people better.	20			
57	9:19-9:27	8 min	Goal 11	21-25			
67	9:27-9:37	10 min	video about China. what principle resonated the most?	24			
72		5 min	BREAK	25			
		Session 2	**Inclusive urban design**		Sustainable and I		
	9:45-9:46	1 min	Agenda	1-3			
5	9:46-9:51	5 min	Quick reminder of what came up earlier for inclusive cities. Quality of life for everyone. [removed]	4	who are cities made for? (nonmarginalized, able-bodied) man who is traveling to and from work, with a car		
20	9:51-10:06	15 min	Goal of inclusive cities. Video. Intersectionality. Facts	5-10	https://www.unwomen.org/sites/default/files/Headquarters/Attachments/Sections/Library/Publications/2020/Welcome-to-Equiterra-where-gender-equality-is-real-Brochure-en.pdf		
35	10:06-10:16	10 min	Why is this important? (Discussion) Case study on the US: unequal economic opportunity	11-14			
40	10:16-10:21	5 min	UN Women: 4 parts (ending violence against women, economic empowerment, leadership and governance, gender mainstreaming and institutional development)	16	participation is critical	people, environment, economy oriented	
50	10:21-10:31	10 min	Example: "women's safety audits"	17-20			
			Example: ??				
52	10:31-10:33	2 min	Choose a city from list		Singapore, Copenhagen, Amsterdam, Oslo, NYC,		
67	10:33-10:48	15 min	Small group discussion--what are the 3 biggest inclusivity issues in the city you chose? choose one and choose an idea that could be implemented to fix this		Create ppts for each city for them to edit?		
77	10:48-10:58	10 min	Report out				
	10:58-11:00	2 min	Feedback? Survey. See you next week!				
			Give access to slides with various resources				
		Session 3	**Smart (and cognitive) cities--the tech**		Sustainable and I		
5	8:30-8:35	5 min	Agenda + Meet 2 new people! (with ice breaker question)		Smart (tech)--Is it focused on improving the quality of life? for everyone? is it sustainable? is it safe? is it affordable?		
10	8:35-8:40	5 min	Remind them what came up before. Note differences and overlaps: 'smart' = tech, 'resilient' = disaster preparedness, 'green' = environmental sustainability.		How comfortable is everyone with tech?		
	8:40-8:46	6 min	Video overview of smart cities				
15	8:46-8:52	2 min	Have you seen any of these in your daily lives or travels?		balance of sustainability vs tech (water, energy, electronic waste, greenhouse gas emissions)		
25	8:52-8:58	6 min	Underlying tech review with examples--do you know any of these?				
	8:58-9:08	10 min	What issues have you heard of or do you foresee? Then review of different examples of issues		lots of good...but also need to understand the tradeoffs		
30	9:08-9:14	6 min	Issues around inclusivity: potholes, policing				
			Needs to not be tech for the sake of tech (or efficiency). Needs to still place people at the center				
40	9:14-9:19	5 min	Different parts of the city that can use tech. (transportation, building, energy, etc)				
55	9:19-9:34	15 min	How could you use technology to fix the inclusivity issues you chose? Choose one specific example (it doesn't have to solve the entire issue). What are the drawbacks? Is anyone left out? (intersectionality)				
70	9:34-9:40	6 min	Report out				
	9:40-9:45	5 min	BREAK				
		Session 4	**Sustainability and the circular economy in urban design**		Sustainable and I	https://www.youtube.com/watch?v=WYo4ogMrl_k&ab_channel=MegaBuilds	
	9:45-9:55	10 min	Introduction. Discussion: what's a green city? Video	1-9		https://www.youtube.com/watch?v=o3ByrTTtdiM	
	9:55-10:00	5 min	Example: Curitiba, Brazil	9-11			
	10:00-10:05	5 min	What is a circular economy/circular city? 5.5 min video	12	Circular Economy		
	10:05-10:15	10 min	Examples of circular city. Most important parts. Mimic nature?	13-17	Amsterdam, Glas	Circular City - Yo	
	10:15-10:25	10 min	Quiz: Critical thinking around environmental sustainability	18-27	Findhorn, Scotland	https://www.youtube.com/watch?v=ZMn-bCdThEg&ab_channel=CrashCourse	
	10:25-10:35	10 min	Green spaces = healthier people. Who might benefit more? (discussion)	28		Vishaan Chakrab	
	10:35-10:50	15 min	Small group discussions				
	10:50-10:55	5 min	Report out				
	10:55-11:00	5 min	Feedback and survey				
		Session 5	**Resilience in urban design**		Sustainable and I		
5	8:30-8:35	5 min	Ice breaker				
10	8:35-8:40	5 min	What is a resilient city?				
	8:40-8:50	10 min	How do we make cities more resilient?				
	8:50-9:00	10 min	Climate change--how it is affecting cities? Video and examples		7.4 Climate Chan		
45	9:00-9:15	15 min	Guest speaker				
	9:15-9:20	5 min	Jobs in this field (how it connects to STEM)				
65	9:20-9:40	20 min	Final project				
75	9:40-9:50	10 min	Report out				
75	9:50-9:55	5 min	Post-survey				
			Who is impacted more? Why?

Review:What’s a green city?

Co-funded by
the European Union

An environmentally sustainable city (eco-city/green city), is an urban area designed and managed to meet the needs of its present inhabitants **without compromising the ability of future generations to meet their own needs** — with a specific emphasis on minimizing its environmental footprint.

Environmental sustainability in cities means ensuring that urban development:

- Reduces emissions and pollution (air, water, noise, and soil),
- Protects and regenerates ecosystems and biodiversity,
- Manages natural resources responsibly, especially energy, water, and land,
- Adapts to climate risks like floods, heatwaves, and droughts.

Cities are both the problem and the solution…most of the issues come from cities, but they are also where most of the innovation is coming from as well!

CREATING
SUSTAINABLE
CITIES

Co-funded by
the European Union

Core environmental priorities for cities

- **Urban Decarbonization**: Transitioning to renewable energy, improving building efficiency, and reducing transport-related emissions.
- **Circular Urban Systems**: Designing out waste, reusing materials, and recovering resources (especially in construction and food).
- **Green Infrastructure**: Integrating natural systems into city planning (green roofs, urban forests, rain gardens).
- **Low-impact Urban Design**: Compact, mixed-use planning that reduces car dependency and preserves surrounding natural areas.
- **Climate Adaptation and Resilience**: Building infrastructure and governance systems that can anticipate and respond to climate shocks.

Co-funded by
the European Union

Key challenges

- **Urban sprawl** and land-use pressure on ecosystems
- **Overburdened infrastructure** that increases emissions and waste
- **Inequitable environmental burdens** (e.g. pollution in marginalized neighborhoods)
- **Short-term political cycles** vs long-term sustainability investments

Co-funded by
the European Union

Example: Curitiba, Brazil

- Green space:
  - 52 square meters of green space per person
  - Vs Buenos Aires: 2 square meters per person
- Public transport:
  - Bus Rapid Transport (BRT). 1974. Basis for BRT systems in 300+ cities
  - 70-80% of daily trips for 85% of the population
  - Sometimes every 90 seconds!
  - 2 million per day (compared to London tube system with 3 million)
- Waste:
  - Waste-for-cash program
  - 90% of people take part
  - 4lbs of waste for tokens that can be traded for 1lb of produce.
  - 70% of the waste is recycled.
- Poverty reduction:
  - 30-year economic growth rate is 3.1 percent higher than the national average
  - Per-capita income is 66 percent higher.
  - Over the last 60 years, the population increased by 1,000% to 2 million people

Circular cities: Case studies

Beijing Chaoyang Circular Economy Industrial Park

Clustering industries to reuse each other's byproducts

Electric Vehicle Charging and Battery Swap Station:

Serves sanitation vehicles, electric cars and Dongdong buses. Serves up to 400 vehicles daily.

Restaurant Kitchen Waste Treatment Plant:

Note: food waste is a huge issue in China (70% of waste is food waste, as compared to around 24% in US/Europe)

Largest kitchen waste treatment plant in China. Can process 400 tons of kitchen waste per day. A biochemical treatment technology with high-temperature aerobic fermentation allows to produce 'microbial inoculant' for organic agriculture.

Medical Waste Treatment Plant:

Daily treatment capacity of 30 tons.

Waste Incineration Power Plant:

First modern large-scale domestic waste incineration project in Beijing, and also the largest single-line treatment plant in Asia.

Designed daily capacity is 1,600 tons. Annual rated power generation is of 220,000 MWh (about 73,000 houses in Beijing)

Sanitary Landfill:

First large-scale fully-enclosed domestic waste landfill in Beijing.

Total storage capacity of 8.92 million cubic meters and a daily waste disposal capacity of 1,000 tons.

Benefits

Producing capacity of green power of 600 million kWh/year

Crude grease of 5,000 tons/year

Renewable resources and renewable products of more than 4,000 tons/day, reducing CO2 emissions by nearly 1.6 million tons per year

Co-funded by
the European Union

Circular cities: Case studies

Cape Town, South Africa

WISP: Western Cape Industrial Symbiosis Programme

Connects businesses with each other to exchange resources!

231 synergies facilitated to date

- Diverted over 143,000 tons of waste from landfill and created over 400 jobs.
- Saved over 435,000 tons C02 emissions (equivalent to 117,840 homes in South Africa)
- Generated $8mil in additional revenue, cost savings, and private investments

Co-funded by
the European Union

Some examples

Waste wood -> wooden pallets

- Waste management company, wooden pallet company
- Diverted 79 tons of wood waste from landfill, saves the companies money, and keeps virgin wood from being used

Waste egg whites -> confections (sweets)

- Ice cream manufacturer, confectionary company
- Saved on waste disposal costs for the first and made add'l revenue for the second

Organic waste -> insect feed

- Waste management company, insect farming company
- 3,360 tons of organic waste is being sold to feed insects instead of going to a landfill

Which of the following urban policies align with circular economy goals...while also minimizing unintended environmental harm?

Co-funded by
the European Union

Why?

B. Local material reuse hubs support the circular economy by facilitating the reuse of construction materials, reducing the demand for virgin resources.

D. Take-back programs for electronics encourage recycling and proper disposal, aligning with circular economy principles.

A. While promoting electric vehicles can reduce emissions, it doesn't directly address material reuse or waste reduction.

C. Waste-to-energy incineration can reduce landfill use but may discourage recycling and doesn't promote material reuse.

TechUK

According to recent data, which sector is most frequently underestimated in urban sustainability plans despite having a high impact on emissions and resource consumption?

Co-funded by
the European Union

Why?

The construction sector, including building operations, significantly contributes to urban emissions and resource consumption. However, its impact is often underestimated in sustainability planning.

ScienceDirect

A city introduces green roofs across all municipal buildings. Which of the following should be considered to assess whether this contributes meaningfully to long-term environmental sustainability?

Co-funded by
the European Union

Why?

Evaluating the sustainability of green roofs involves considering maintenance capabilities, the environmental impact of construction materials, and ecological benefits like biodiversity enhancement and stormwater management.

US EPA

ScienceDirect

A city council is debating between two proposals: (1) subsidize compost bins for every household, or (2) invest in a large-scale anaerobic digestion facility. Both address organic waste. What trade-off most accurately describes their difference in long-term sustainability strategy?

Co-funded by
the European Union

Why?

Household composting encourages individual behavior change and community engagement, while anaerobic digestion offers a scalable solution for organic waste management but may involve less direct public participation.

ScienceDirect

Which of these challenges often arises when applying circular economy frameworks in cities in the Global South?

Co-funded by
the European Union

Why?

In many Global South cities, the informal sector plays a crucial role in waste management. However, circular economy initiatives often overlook integrating these informal systems, leading to challenges in implementation.

circle-economy.com

Green spaces = healthier people

How do they help?

- Cooler temperatures
- More (and hopefully safer) exercise
- Nature decreases stress and depression
- Place for children to play
- Decreased air pollution
  - Fewer cars
  - Plants produce oxygen and filter out air pollutants for better air quality
- Less isolation and more social inclusivity
- Less noise pollution
- Opportunities for urban gardens

**Participatory planning is important!

https://unhabitat.org/sites/default/files/2025/01/final_public_space_and_urban_health.pdf
https://iris.who.int/bitstream/handle/10665/345751/WHO-EURO-2016-3352-43111-60341-eng.pdf

Who benefits more from these?

Photo by Laurentiu Morariu on Unsplash

Co-funded by
the European Union

Studies have shown…

Housewives–and women in general

- Shown to have less stress
- However, may worry more about safety if not designed well–BUT better than exercising on streets, where harassment is more often.
- Pregnant women (reduced blood pressure, reduced depressed, especially for women from disadvantaged groups)

Older people at risk of isolation and less exercise–social ties and community.

Children, who otherwise may not have the option to socialize in a safe space–and with different cultures.

Adolescents
Important to think about the use of space: if all the "play" space is focused on sports that are more traditionally focused on boys (basketball, football), then girls won't feel like it's a space for them.

"Deprived subpopulations and minority groups"
Reduced psychological distress in a deprived urban population in the US
Socioeconomic inequality in mental-wellbeing was 40% narrower among respondents reporting good access to green space
Often have lack of access to cooling systems, so the role of vegetation on cooling urban areas is more important for the urban poor

https://bit.ly/sustainable-cities-folder

Group work:

What is your city doing particularly well around sustainability/circular systems/green space?

What is something they should do better? What would have the most impact, particularly for more vulnerable groups?

the European Union

The tech

IoT 	network of devices that connect to each other and the cloud
5g 	the network that allows a lot more people/devices to send much more data with much higher speed and lower latency (allowing for near real-time)
Big data 	all of the data created by sensors, people, weather satellites, etc. Includes structured, semi-structured, not structured
Blockchain 	secure, private, and transparent way to transmit data
AI 	the ability to “think” about all of this information in a way that allows for predictive analysis
Edge computing 	the computing is done in the local area/device so that the data doesn’t need to be sent to a central “cloud” for processing

Co-funded by
the European Union

Example: Traffic Optimization System

To reduce congestion, cut emissions, and improve emergency response times

IoT (Internet of Things)
→ Smart traffic lights, cameras, pollution monitors, and connected vehicles continuously gather real-time data (vehicle counts, speed, weather, air quality, road conditions).

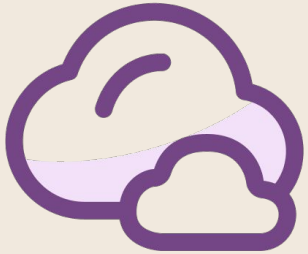
5G
→ Enables real-time data exchange between IoT devices, vehicles, and traffic control centers. Emergency vehicles can instantly communicate with traffic lights to prioritize green signals.

Big Data
→ The system collects and processes data from thousands of sensors and external sources (e.g. weather forecasts, public transport GPS feeds) to understand patterns and predict traffic flows.

AI (Artificial Intelligence)
→ AI models analyze incoming data to adjust traffic lights dynamically, reroute traffic during accidents or construction, and predict congestion before it happens.

Blockchain
→ All data interactions (like vehicle location updates, traffic light changes, or ride-sharing transactions) are stored securely and transparently. Blockchain also helps in managing microtransactions—for example, rewarding citizens with crypto-tokens for using less congested routes or public transport.

Edge Computing
→ Reduces latency and bandwidth usage by processing critical data (like traffic camera feeds) locally rather than sending everything to a central cloud.



What issues are there with this kind of technology?

People/Inclusivity

- Technocentrism over human-centered design
- Digital divide
- Surveillance and privacy (& social engineering)
- Algorithmic bias
- Public participation gaps
- Gentrification and displacement
- Labor and human rights issues in tech supply chains

Environment

- Greenhouse gas emissions
- E-waste and resource extraction
- Energy consumption of smart infrastructure
- Greenwashing and token sustainability
- Climate resilience gaps
- Water use and pollution from tech infrastructure
- Greenhouse gas emissions from tech operations and supply chains

Technology

- Bugs and inaccuracy of algorithms
- Data accuracy (and “overfitting”)
- Security vulnerabilities
- Interoperability challenges
- Over-reliance on technology
- Cost and vendor lock-in

Co-funded by
the European Union

Case studies

Potholes and smartphones (Boston)

- Smartphone app to discover potholes on public roads through automated recognition by the phone's accelerometer
- However, lower income (and particularly older) residents, had fewer smartphones (16%)
- Therefore, lower income areas that may have more potholes would get fewer resources to fix them.

https://www.sciencedirect.com/science/article/pii/S2515856220300067

Predictive policing (UK)

- Smart Information System (SIS): AI+Big Data
- 2023: 24.5 stops and searches for every 1,000 Black people, 5.9 for every 1,000 white people
- This biased data is then fed into the algorithms, which is in turn fed back to police

https://www.researchgate.net/publication/304746305_Privacy_concerns_in_smart_cities
https://www.amnesty.org.uk/press-releases/uk-police-forces-supercharging-racism-crime-predicting-tech-new-report

“Racism has always been about predicting, about making certain racial groups seem as if they are predisposed to do bad things and therefore justify controlling them.”

Dorothy Roberts, writer and academic, University of Pennsylvania

What is the goal of inclusive cities, and why is this important?

[Equiterra](), a country of equality, as imagined by UN Women

Credit: UN Women/Ruby Taylor
https://un-women.medium.com/welcome-to-equiterra-where-gender-equality-is-real-6fc832c383fe

WOMEN STEM UP

Who are affected differently by cities?

Sexual Orientation/
Gender Identity

Co-funded by
the European Union

Some facts (the bad)

- Less than 10% of the Paris metro network is wheelchair accessible
- In Dhaka, Bangladesh, a city of over 23 million, less than 2% of roads have proper pedestrian infrastructure, disproportionately affecting children, the elderly, and people with disabilities.
- In LA, wealthier neighborhoods have up to 42% tree canopy coverage, compared to just 10–15% in low-income areas, worsening urban heat for already vulnerable populations.
- According to UN Women, 99.3% of women in Cairo report experiencing sexual harassment in public spaces, a major barrier to gender-inclusive mobility and participation in city life.
- About 70% of Lagos's 20+ million residents live in informal settlements or slums with limited access to water, sanitation, and transport, despite the city's massive economic growth.
- In São Paulo, low-income residents from peripheral areas often spend over 4 hours a day commuting, largely due to poor transit access and urban sprawl — reducing time for education, caregiving, and community life.

Co-funded by
the European Union

Some facts (the good)

- Paris plans to expand its bike lane network to over 1,000 km by 2026, prioritizing mobility for non-drivers and reducing transport inequality, particularly for women and young people.
- Over 3,000 cities globally (including New York, Paris, and Porto Alegre) now use participatory budgeting, allowing residents—especially marginalized groups—to directly influence how public funds are spent. In Surabaya, Indonesia, 50% of its annual municipal budget is allocated to local community projects
- Around 60% of Vienna's population lives in city-owned or subsidized housing, helping prevent gentrification and keeping neighborhoods mixed and accessible across income levels.
- The Metrocable system in Medellín reduced commute times for hillside residents by 40%, providing affordable access to jobs, education, and healthcare for low-income communities.
- In Barcelona, car traffic dropped by 25% in areas where superblocks were implemented, giving more space to pedestrians, kids, and disabled residents while reducing air and noise pollution.
- Kigali (Rwanda) implemented a citywide safety code for public transport, including complaint hotlines and driver accountability, contributing to a reported 35% drop in harassment cases on buses within the first year.
- To combat heat and flooding, Freetown launched a "Freetown the Treetown" initiative, planting 500,000 trees by 2023 with resident involvement, improving resilience and equity in informal settlements hit hardest by climate change.

Case study: the cost of unequal economic opportunity (cont'd)

- Childhood poverty (an outcome of insufficiently inclusive growth) costs the US economy ~$500bil per year–4% of GDP, due to lost productivity, higher crime and incarceration, and larger health expenditures
- Hostilities that fray social and political cohesion and good governance (which affects economic growth)

https://www.brookings.edu/articles/opportunity-for-growth-how-reducing-barriers-to-economic-inclusion-can-benefit-workers-firms-and-local-economies/

UN Women

Safe Cities and Safe Public Spaces

Global flagship initiative to prevent sexual harassment in public spaces. Partner cities include Cairo, Quito, Port Moresby, Delhi, and Kigali.

Focus on:

- Ending violence against women
- Economic empowerment
- Leadership and governance
- Gender mainstreaming and institutional development

Co-funded by
the European Union

Example: Women's safety audits

- Women and community members walk through neighborhoods to identify unsafe areas (poor lighting, lack of transport, overgrown areas, etc.)
- Originated in Toronto in the 1980's (METRAC–group of women who came together to fight against sexual assault and murder of women)
- Start close to dusk to see area during day and night
- Shows how participation of the groups affected is critical

Co-funded by
the European Union

Case Study: Women's safety audits

Delhi, 2013

- 95% of women and girls in Delhi said they felt unsafe in public spaces
- 51% of men reported that they had themselves perpetrated sexual harassment or violence against women and girls in public spaces in Delhi. In the study, 25 per cent said they had done so in the last six months.
- In cases of sexual violence, many men blamed women for their behaviour. In the study, three out of four agreed with the statement 'Women provoke men by the way they dress' and two men out of five fully or partially agreed that 'Women moving around at night deserve to be sexually harassed'.
- Nearly 73 per cent of women said they do not feel safe in their own surroundings as well, and reported feeling unsafe all the time.

https://www.unwomen.org/en/news/stories/2013/2/un-women-supported-survey-in-delhi

Co-funded by
the European Union

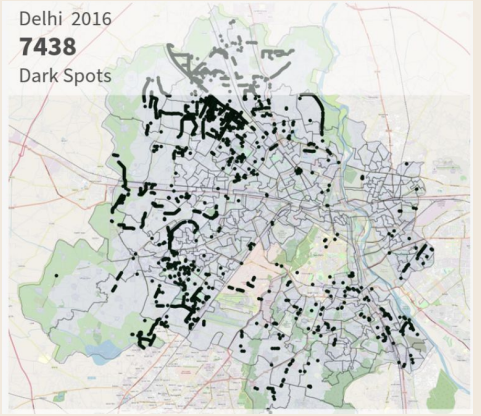
Case Study: Women's safety audits

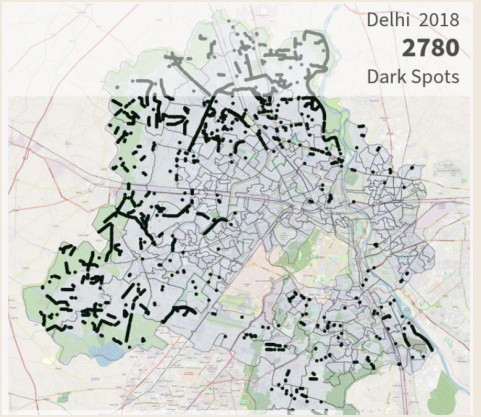
Findings

- Insensitive attitudes of the police and public transport staff including drivers and conductors
- Gaps in provision and effectiveness of essential services (access to telephone booths, police and 24-hour hospitals)
- Poor lighting near bus stops (and in general a need for more street lighting infrastructure)
- Lack of well-maintained public toilets
- Absence of pavement
- "Never before was violence against women considered an urban planning problem. But now more urban planners and policymakers are reviewing urban design – thanks to our programme," says Sushma Kapoor, Officer-in-Charge, UN Women.
- "The programme has really helped to make women an equal partner in ensuring their safety. Women are now able to speak of their experiences directly to the police, and tell us what is needed to be done," says Suman Nalwa, Additional District Commissioner of Police, Special Police Unit for Women and Children.
- source

Technology: Safetipin

SAFETIPIN
Supporting Safer Cities





Technology: Safetipin

- NGO created an app for crowdsourcing information on unsafe areas in towns, sharing that data with the public and governments so they can be addressed
- Launched in Delhi in 2013 but now in 16 countries and 78 cities, almost 600,000 audits
- Data used as inputs to where lighting could be improved, and the Delhi Police used it to reformulate their patrolling routes
- Digital Divide (poverty, gender)--
  - Worked with NGOs to hear the voices of marginalized people
  - Supported women working in groups so those without smartphones could participate (with others who did have them) Study
  - Provided posters with the information in different areas so residents could see and provide thoughts/feedback in person.

Choose a city from the list for small-group breakouts

You'll be working in these groups for the rest of the sessions!

- Singapore
- Copenhagen
- New York City
- Amman
- Nairobi
- Bogotá

Co-funded by
the European Union

Steps

- Step 1: Inclusivity issues and potential fixes
- Step 2: Using technology focused on urban design to address one of the issues
- Step 3: Examining the environmental sustainability of the various options to solve the issues, with a final proposal with pros and cons

Co-funded by the European Union

What are the three biggest inclusivity issues in the city you chose?

Choose one and discuss how that could be fixed (focus on urban design).

Sustainable and Inclusive Cities

June 2025

Instructor: Janice Levenhagen, Katja Legisa

Grant agreement: 2022-1-SE01-KA220-HED-000086239

Who am I?

- Computer engineer turned gender equity in STEM and entrepreneurship
- Left tech due to harassment and bias–very passionate about changing that for other women
- Launched and ran a nonprofit for girls and women in tech in the US for 8 years. 20+ cities, serving 8,000 people per year with 1,500 volunteers
- Now I do consulting for organizations serving women and girls, work on EU projects like this, and run a nonprofit called Wevise (wevise.org) around mentorship in tech

Co-funded by the European Union

Women STEM Up Project

✔️EU-funded project to support young women in STEM majors to improve their confidence, passion, and creativity, with the end goal of encouraging them to stay in STEM.

✔️Also, to help universities do a better job of supporting women in STEM majors

✔️This course is part of ‘Women STEM Up for Good’, which focuses on boosting women’s (your) passion for STEM using ESTEAM for social good

✔️By attending all 5 sessions, you will receive a certificate of participation, which you can add to your CV and LinkedIn

✔️If you’re in one of the project countries (Belgium, Sweden, Norway, or Greece), you could be chosen to attend a 3-day hackathon in Greece!

the European Union

WOMEN STEM UP

Sessions

1: Introduction to Sustainable and Inclusive Cities

2: Inclusive Urban Design

3: Smart Cities

4: Environmental Sustainability and the Circular Economy in Urban Design

5: Resilient Cities

****Focus is on exploration, discussion, critical thinking, and problem solving. Participation is critical!****

Co-funded by
the European Union

Co-funded by
the European Union

Agenda: Session 1 (Introduction)

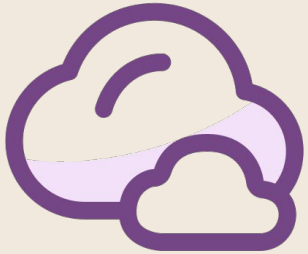
10 min	Introduce instructor and course
5 min	Student intros and ice breaker
10 min	*Discussion:* What issues do cities currently have?
5 min	*Quiz:* Why is this important?
7 min	*Discussion+video:* What is a sustainable city?
7 min	*Discussion:* What is an inclusive city?
5 min	*Definition:* Smart and cognitive cities
8 min	*Overview:* SDG 11
10 min	*Video:* 7 principles for building better cities
5 min	BREAK

Ice breaker

- Name
- School
- Major and year
- If you could solve one problem in the world today, what would it be and why?

Co-funded by
the European Union

Co-funded by
the European Union



What issues do cities struggle with?

Inequality and transport: who decides where you go?

Nerea Ramírez Piris
20 September 2023 • 3 min read

Transport systems are typically designed for men, and service the journeys they want to make. This is especially true for middle-aged, white, cis-male, able bodied, wealthy men. If you don't fit this description, transport might not serve your daily needs.

Copenhagen, Denmark. In some cities, cycle paths are also accessible for people using wheelchairs or mobility scooters to get around, enabling people living with and without disabilities to join in social rides. © Chris Grodotzki / Greenpeace

Co-funded by the European Union

What is an inclusive city?

- What could cause different experiences between different people?
- What ARE “different” people? Different from who?
- What might those different experiences look like?

Co-funded by
the European Union

Two more definitions

- **Smart city:**
  Uses data and digital technologies (IoT, sensors, AI) to improve urban services like traffic, energy, and public safety. Focus is on efficiency, connectivity, and innovation.

- **Cognitive city:**
  Goes further by incorporating machine learning and adaptive systems that learn from residents' behaviors and predict needs. Emphasis is on anticipating change and human-centric adaptation.

Co-funded by
the European Union

SDG 11:

Make cities and human settlements inclusive, safe, resilient and sustainable

By 2030, ensure access for all to adequate, safe and affordable housing and basic services and upgrade slums

By 2030, provide access to safe, affordable, accessible and sustainable transport systems for all, improving road safety, notably by expanding public transport, with special attention to the needs of those in vulnerable situations, women, children, persons with disabilities and older persons

By 2030, enhance inclusive and sustainable urbanization and capacity for participatory, integrated and sustainable human settlement planning and management in all countries

Strengthen efforts to protect and safeguard the world's cultural and natural heritage

By 2030, significantly reduce the number of deaths and the number of people affected and substantially decrease the direct economic losses relative to global gross domestic product caused by disasters, including water-related disasters, with a focus on protecting the poor and people in vulnerable situations

By 2030, reduce the adverse per capita environmental impact of cities, including by paying special attention to air quality and municipal and other waste management

By 2030, enhance inclusive and sustainable urbanization and capacity for participatory, integrated and sustainable human settlement planning and management in all countries

Support positive economic, social and environmental links between urban, peri-urban and rural areas by strengthening national and regional development planning

By 2020, substantially increase the number of cities and human settlements adopting and implementing integrated policies and plans towards inclusion, resource efficiency, mitigation and adaptation to climate change, resilience to disasters, and develop and implement, in line with the Sendai Framework for Disaster Risk Reduction 2015-2030, holistic disaster risk management at all levels

Support least developed countries, including through financial and technical assistance, in building sustainable and resilient buildings utilizing local materials

Sustainable and Inclusive Cities

May 2025

LINKÖPING UNIVERSITY

UNIVERSITY OF THESSALY

STIMMULI for social change

NTNU Norwegian University of Science and Technology

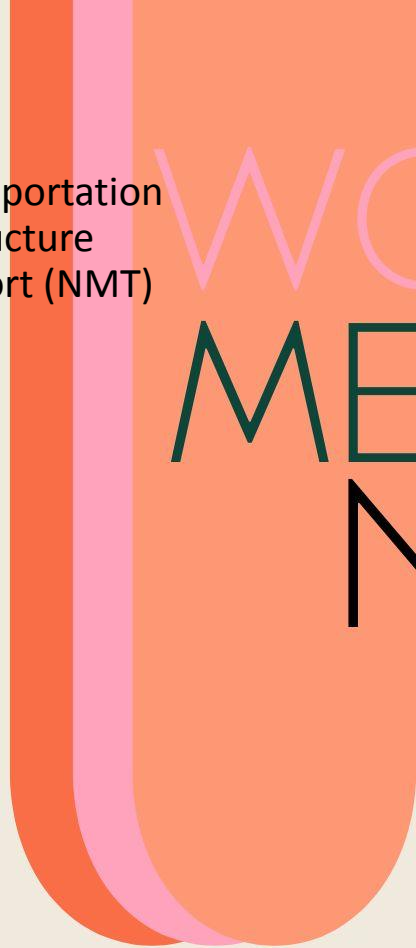
Grant agreement: 2022-1-SE01-KA220-HED-000086239

What are the three biggest inclusivity issues in the city you chose?

- Roads only cater to motorised transports (cars dominate most of the urban space) (only 20% of roads have footpaths (iRAP))
- Lack of inclusive infrastructure restricts mobility and access to opportunities for people with disabilities.
- Reliance on informal transport (matatus and boda bodas)

Solution

1. Formalize and improve the transportation
2. Improve the pedestrian infrastructure
3. Invest in Non-motorized Transport (NMT)
4. accessible design



Co-funded by the European Union

Technology

Smart Mobility and Integrated Transport System (real time public transit tracking such as Moovit)

Drawbacks:

1. Only for people with smartphones or digital literacy
2. cost of infrastructure is high
3. Matatu driver

AI and Data driven traffic management (since Nairobi is so congested)

Drawbacks:

Require a huge energy and electricity and high cost for infrastructure

Micro-mobility and non-motorized transport (NMT)

Drawbacks:

1. Not suitable for elderly, disabled,
2. can be expensive if the budget is constraint
3. formalizing system- regulation

Co-funded by the European Union

What is Nairobi doing well?

Green Spaces: Nairobi has major green zones like Karura Forest, Uhuru Park, and Nairobi Arboretum

Issue?

Unequal Access to Green Spaces:

Informal settlements and low-income neighborhoods often lack safe, accessible green areas.

Neglect and Encroachment:

Some public parks face degradation due to poor maintenance or threats from development.

Safety and Inclusivity:

Inadequate lighting, security, and accessibility features make many parks unusable for women, children, and people with disabilities.

Solution:

Public-private partnership such as scale karura model (invite school, NGOs, small business) and also offer tax incentive or CSR recognition to maintain funding, co design the area.

Co-funded by the European Union

Final solution for transportation:Invest in affordable and reliable public transit.

1. Formalizie public transport (matatus, bodas)
2. Scaleup Bus Rapid Transit (BRT) especially for low-income areas such as Eastlands, Kayole, Kibera
3. Subsidize public transport to be more affordable

Environmental impact:

-Fewer private vehicle= less emissions.
-Improved air quality
-Reduced noise pollution
-Climate resilience

pros:

-Increases safety, reliability, and regulation

-Supports livelihoods in the transport sector

-Reduces traffic congestion and emissions

-Makes the city more accessible for everyone

cons:

-High initial cost

-Require major policy and regulation changes

-Digital divide (especially for app-based ticketing or real time transportation apps)

-Matatu job losses (reduce jobs in informal transportation)

Co-funded by the European Union

Is it resilience?

✔ **Yes, if designed properly**

- It adapts to shocks (fuel price surges, pandemics).
- Electric buses can adapt to climate goals.
- BRT lanes are flexible and can be re-routed if needed.

❌ **No, if…**

- It depends on a centralized system with weak maintenance.
- Excludes informal economies or marginal areas.
- Fails to plan for floods, heat, or other climate-related impacts.

Who might be left behind?

1. People who lack access to the internet
2. People with disabilities
3. Low income people
4. Rural-urban commuters
5. People
6.

Solution:

-Subsidize fares for vulnerable users
-Train and integrate current operators
-Prioritize safety, accessibility, and coverage in all neighborhoods
